I chose to measure the stairs behind the Jackson Street Building. The Tread Length was twelve and a half inches and the Riser Height was five inches, equating to 22 inches with the applied formula. I thought that these stairs were relatively comfortable, as they were not too steep. However, I did catch myself running out of breath as I reached the top of the stairs. Perhaps the designer could have incorporated a more gradual incline with more, less steep stairs. I do, however, appreciate that the stairs are encompassed by large trees, which allows me to climb the stairs in the cool shade on a hot day.
